NuGet

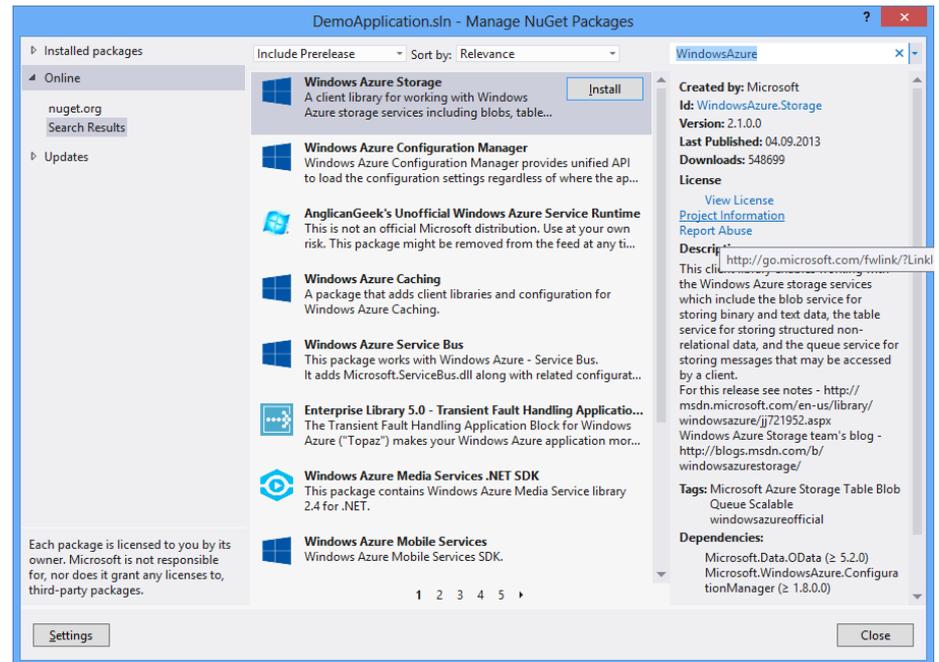

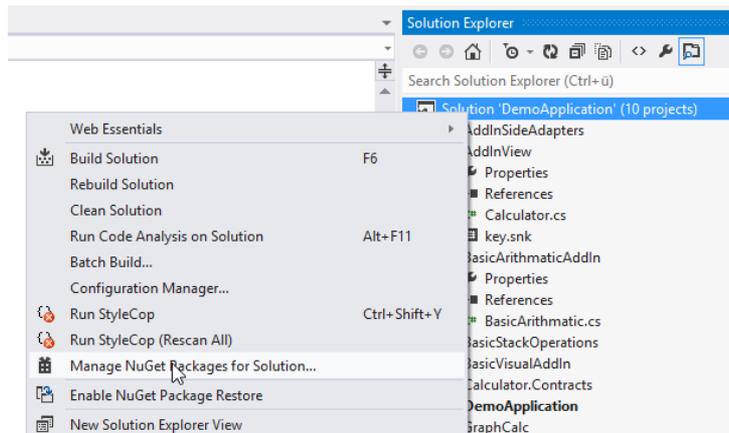

NuGet

Package Manager für die Microsoft-Entwicklungsplattform

Was ist NuGet?

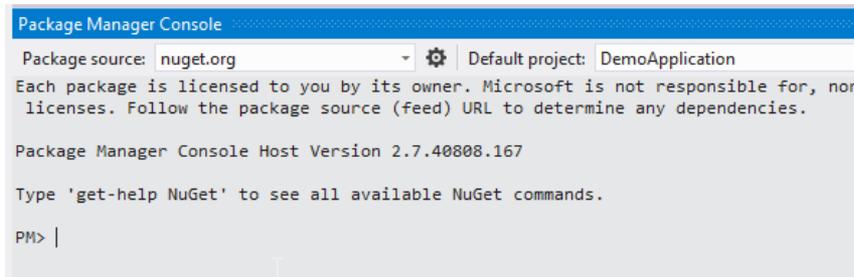

- ▶ Werkzeug zur einfachen Verteilung von Paketen (=Libraries und Tools)
- ▶ Alles Notwendige in einem Paket
 - Binaries für verschiedene Plattformen
 - Optional Symbole und Sourcen
 - Anpassungen am Projekt (z.B. Referenzen, Änderungen am app/web.config)
- ▶ UI-Integration in Visual Studio
 - Ab VS2010, eingeschränkt auch in Mono
 - Express-Editionen werden unterstützt
- ▶ <http://www.nuget.org>
<http://nuget.codeplex.com/> (Sourcecode)

NuGet in Visual Studio

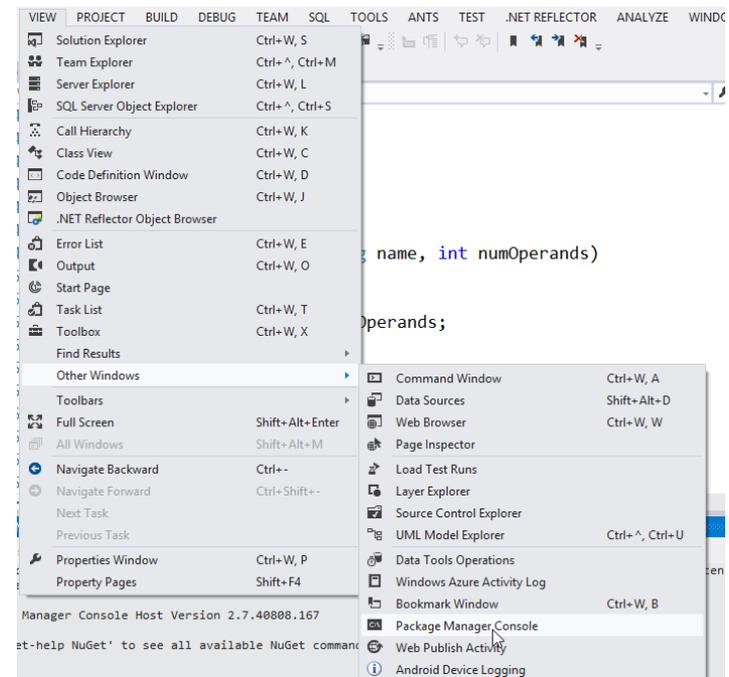

NuGet in Visual Studio

- Package Manager Console
- PowerShell console in Visual Studio
- Automate Visual Studio and NuGet
- [NuGet PowerShell Reference](#)

```
Package Manager Console
Package source: nuget.org | Settings | Default project: DemoApplication
Each package is licensed to you by its owner. Microsoft is not responsible for, nor licenses. Follow the package source (feed) URL to determine any dependencies.
Package Manager Console Host Version 2.7.40808.167
Type 'get-help NuGet' to see all available NuGet commands.
PM> |
```

NuGet Pakete erstellen

- ▶ Kommandozeilentool *nuget.exe*
 - Pakete erstellen (*Pack* Command)
 - Pakete veröffentlichen (*Push, Delete* Command)
 - Paket installieren (*Install, Restore, Update* Command)
 - Generieren eines *nuspec*-Files (*Spec* Command)
 - Wichtig für Buildautomatisierung
 - [Kommandozeilenreferenz](#)
- ▶ NuGet Package Explorer
 - Grafisches UI zur Erstellung/Bearbeitung von NuGet Paketen und *nuspec* Files
 - <http://npe.codeplex.com/>

```
<?xml version="1.0" encoding="utf-16"?>
<package xmlns="http://schemas.microsoft.com/packaging/2012/06/nuspec.xsd">
  <metadata>
    <id>CockpitFramework.Data</id>
    <version>$version$</version>
    <title>Cockpit Framework Data Layer</title>
    <authors>software architects gmbh</authors>
    <owners>software architects gmbh</owners>
    <requireLicenseAcceptance>>false</requireLicenseAcceptance>
    <description>...</description>
    <releaseNotes></releaseNotes>
    <dependencies>
      <group targetFramework=".NETFramework4.0">
        <dependency id="CockpitFramework.Dependencies"
          version="[$version$]" />
      </group>
      <group targetFramework="s15">
        <dependency id="CockpitFramework.Dependencies"
          version="[$version$]" />
      </group>
    </dependencies>
  </metadata>
</package>
```

Example

nuspec File

<dependencies>

```
<group targetFramework=".NETFramework4.0">
  <dependency id="log4net" version="[1.2.11]" />
  <dependency id="Microsoft.SqlServer.Compact.Private"
    version="[4.0.8482.1]" />
  <dependency id="AvalonEdit" version="[4.2.0.8783]" />
  <dependency id="ClosedXML" version="[0.68.1]" />
  <dependency id="DocumentFormat.OpenXml" version="[1.0]" />
  <dependency id="IronPython" version="[2.7.3]" />
  <dependency id="LumenWorks.Framework.IO" version="[1.0.0]" />
  <dependency id="Newtonsoft.Json" version="[5.0.6]" />
  <dependency id="WindowsAzure.Storage" version="[2.0.5.1]" />
  <dependency id="Microsoft.Bcl.Async" version="[1.0.16]" />
</group>

<group targetFramework="s15">
  ...
</group>
</dependencies>
```

Example

nuspec File

Version range syntax

```
1.0 = 1.0 ≤ x
(,1.0] = x ≤ 1.0
(,1.0) = x < 1.0
[1.0] = x == 1.0
(1.0) = invalid
(1.0,) = 1.0 < x
(1.0,2.0) = 1.0 < x < 2.0
[1.0,2.0] = 1.0 ≤ x ≤ 2.0
empty = latest version.
```

Example

nuspec File

```
<files>
  <!-- net4 -->
  <file src=".\$configuration$\TimeCockpit.Common.dll"
    target="lib\net4" />
  <file src=".\$configuration$\TimeCockpit.Data.dll"
    target="lib\net4"/>
  ...

  <!-- s15 -->
  <file src=".\SL\$configuration$\TimeCockpit.Common.dll"
    target="lib\s15" />
  <file src=".\SL\$configuration$\TimeCockpit.Data.dll"
    target="lib\s15" />
  ...

  <!-- include source code for symbols -->
  <file src=".\...\*.cs" target="src\TimeCockpit.Common" />
  <file src=".\...\*.cs" target="src\TimeCockpit.Data" />
</package>
```

Folder Structure

For Details see [NuGet Docs](#)

```
\lib
  \net11
    \MyAssembly.dll
  \net20
    \MyAssembly.dll
  \net40
    \MyAssembly.dll
  \sl40
    \MyAssembly.dll
  \content
    \net11
      \MyContent.txt
    \net20
      \MyContent20.txt
    \net40
    \sl40
      \MySilverlightContent.html
  \tools
    init.ps1
    \net40
      install.ps1
      uninstall.ps1
    \sl40
      install.ps1
      uninstall.ps1
```

Versioning Notes

- ▶ Things to remember
 - NuGet never installs assemblies machine-wide (i.e. not in GAC)
 - You cannot have multiple versions of the same DLL in one AppDomain
- ▶ DLL Hell
 - Policy too loose: Problems with breaking changes
 - Policy too tight: Problems with library having dependencies on other libraries (e.g. ANTLR and ASP.NET MVC, everyone depending on Newtonsoft JSON)
- ▶ For Library Publishers: [SemVer](#)
 - X.Y.Z (Major.Minor.Patch)
 - Rethink your strong naming policies

```
<runtime>
  <assemblyBinding xmlns="urn:schemas-microsoft-com:asm.v1">
    <dependentAssembly>
      <assemblyIdentity name="mscorlib"
        publicKeyToken="b03f5f7f11d50a3a" culture=""/>
      <bindingRedirect
        oldVersion="0.0.0.0-65535.65535.65535.65535"
        newVersion="1.0.3300.0"/>
    </dependentAssembly>
  </assemblyBinding>
</runtime>
```

Binding Redirects

Note: NuGet can generate this for you
Add-BindingRedirect Command
See [online reference](#) for details

```
<?xml version="1.0" encoding="utf-8"?>
<packages>
  <package id="SomePackage"
    version="2.1.0"
    allowedVersions="[2,3)" />
</packages>
```
